FULL STACK ASSIGNMENT

1.Design HTML Web Page (Static)

Aim: A static HTML web page is a webpage whose content remains fixed unless the HTML/CSS code is manually changed. It can be designed using HTML for structure and CSS for styling.

Program:

```
<!DOCTYPE html>
<html>
<head>
    <title>Student Information</title>

    <style>
        body {
            font-family: Arial, sans-serif;
            background-color: #f2f2f2;
            margin: 0;
        }

        header {
            background-color: #333;
            color: white;
            text-align: center;
            padding: 20px;
        }

        .container {
            width: 70%;
            margin: 30px auto;
            background-color: white;
            padding: 25px;
            border-radius: 10px;
        }

        h2 {
            color: #333;
        }

        table {
            width: 100%;
            border-collapse: collapse;
        }

        th, td {
            border: 1px solid #999;
```

```
            padding: 12px;
            text-align: center;
        }

        th {
            background-color: #333;
            color: white;
        }

        footer {
            text-align: center;
            background-color: #333;
            color: white;
            padding: 10px;
            margin-top: 30px;
        }
    </style>
</head>

<body>

    <header>
        <h1>Student Information</h1>
        <p>Static HTML Web Page</p>
    </header>

    <div class="container">

        <h2>Student Details</h2>

        <table>
            <tr>
                <th>S.No</th>
                <th>Name</th>
                <th>Department</th>
                <th>Year</th>
            </tr>

            <tr>
                <td>1</td>
                <td>Ahamed</td>
                <td>CSE</td>
                <td>3rd Year</td>
            </tr>

            <tr>
                <td>2</td>
                <td>Shaikmulla</td>
                <td>CSD</td>
                <td>2nd Year</td>
            </tr>

            <tr>
                <td>3</td>
                <td>Cherala</td>
                <td>AI&ML</td>
                <td>2nd Year</td>
```

```
            </tr>
        </table>

    </div>

    <footer>
        <p>&copy; 2026 Student Information</p>
    </footer>

</body>
</html>
```

RESULT:

Student Information

Static HTML Web Page

Student Details

S.No	Name	Department	Year
1	Ahamed	CSE	3rd Year
2	Shaikmulla	CSD	2nd Year
3	Cherala	AI&ML	2nd Year

© 2026 Student Information

2.Types of CSS:

Aim: To write an HTML program that demonstrates the three types of CSS — Inline, Internal, and External — used to style a web page.

Program:

index.html

```
<!DOCTYPE html>
<html>
<head>
<title>Types of CSS</title>
```

```
<!-- Internal CSS -->
<style>
  body {
    font-family: "Times New Roman", serif;
  }
  .internal-box {
    border: 2px dashed black;
    padding: 10px;
    width: 300px;
  }
</style>

<!-- External CSS -->
<link rel="stylesheet" href="style.css">

</head>
<body>

<h1 align="center">Types of CSS</h1>
<hr>

<h2>1. Inline CSS</h2>
<p style="font-weight:bold; text-decoration:underline;">
This line is styled using Inline CSS (style attribute on the tag itself).
</p>

<h2>2. Internal CSS</h2>
<div class="internal-box">
This box is styled using Internal CSS (style written inside the <style> tag in the head).
</div>

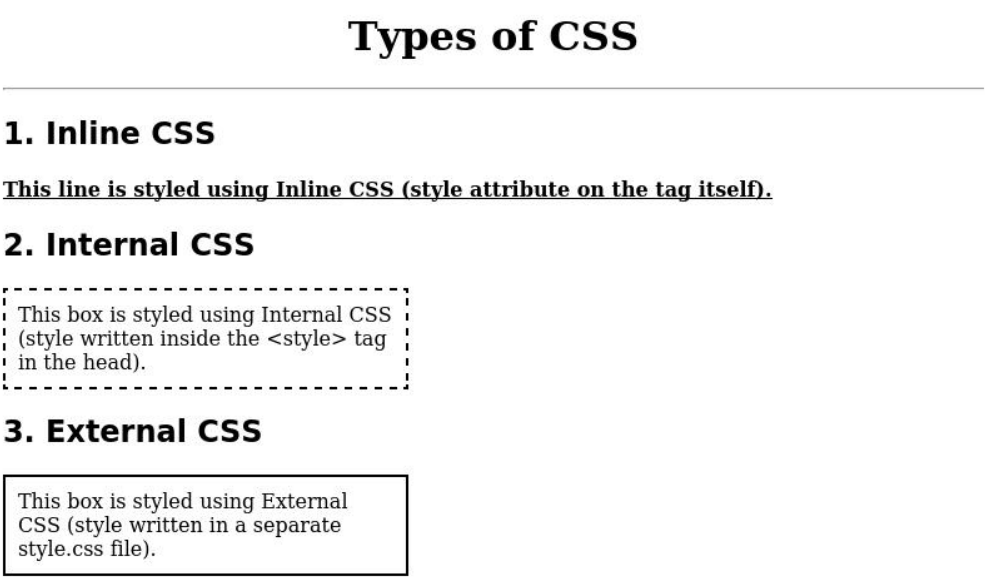

<h2>3. External CSS</h2>
<div class="external-box">
This box is styled using External CSS (style written in a separate style.css file).
</div>

</body>
</html>
```

style.css (external CSS file)

```
/* External CSS file: style.css */
h2 {
  font-family: Arial, sans-serif;
}
.external-box {
  border: 2px solid black;
  padding: 10px;
  width: 300px;
}
```

RESULT:
